

4100-DWS Oil/Water Separator Level Monitor

Continuous interface monitoring of static level oil/water separators

optional panel
probe-head

2" stainless steel
probe connected
to T-type interface

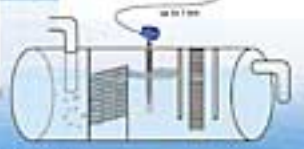

Over 40 years of ARJAY's field-proven oil separator monitoring has been applied to the 4100-DWS level monitor. The unique oil/water probe provides complete flexibility for monitoring oil/water separators in one, two-phase and two.

- precise separation alarm
- automatic trouble clearing
- no moving parts
- control and shut-off panel (shown)
- safety alarm from the process

The 4100-DWS sensing probe monitors the separation level between the grease and the aqueous phase, as the oil accumulates and displaces the water. The probe separates changes. This response allows us to provide complete, instant and long control.

Shut-off panel (shown optional)

up to 1 m
